

GENOMICS OF OPHTHALMIC DISORDERS

GENOMICS / VISION / CLINICAL SCIENCE

COURSE RUNS

21st – 30th APRIL

2027

FUNDING AVAILABLE FOR NHS EMPLOYEES

The unit aims to provide students with specialist knowledge of the role of genomics in the study and treatment of ophthalmic disorders. Students will study the biology, relevant disease examples, and the role of genomics in the diagnosis and treatment of patients. The unit will consider not only the index patient but also the implications for the wider family. This unit will be appropriate for a range of healthcare professionals as well as interested scientists.

This Level 7 (MSc) unit can be taken as standalone [CPD](#) or contribute toward [PGCert](#), [PGDip](#) or [MSc](#) awards
